**Dear  
Sir/Madam,**

I have had a passion for building websites and computers throughout my whole life. I remember making my first website, beside my dad, when I was eight. He owns an IT company, so I was always his buddy for the fun tech stuff. During this time, I created a website with my dad called "gifts4you". He taught me how to buy a domain and YouTube and how to design with simple designs like headings and page organization. I spent hours doing this until I liked what I saw. I will never forget this because it was the first time I knew I was interested in web development.

My high school offered no tech classes, so I had to learn about coding and web development independently. My first coding class was HTML. When I was enrolled at the University of Miami, I got to explore my passion for coding and web development. During my time in college, several people contacted me for help building their websites and problems they may have had in their code. I've also had several classes where I worked on building sites, databases, web applications, and coding projects that dealt with Java, HTML, PHP, Unity, and C++. After a year of coding at the University of Miami, I worked at Oracle as an intern Software engineer for two summers. It was an incredible experience, and I loved seeing how my university knowledge would be used in an actual work setting.

Thank you for taking the time to consider my candidacy. I'm excited to secure a position in the year 2023. I would love to set up an interview to explore how my skills and experience could best meet your team's needs.

I look forward to speaking with you!

Sincerely,

**Christina Matthews**
