October 03, 2022

Dear Sir/Madam,

I have had a passion for building websites and computers throughout my whole life. I remember building my first website when I was eight years old next to my dad. He owns an IT company, so I was always his buddy when it came to the fun tech stuff. During this time, I created a website with my dad called "gifts4you". He taught me how to buy a domain and YouTube how to design with simple designs like headings and page organization. I spent hours doing this until I liked what I saw. I will never forget this because it was the first time I knew I was interested in web development.

It was not until I enrolled at the University of Miami that I got to explore my passion for coding and web development. My high school did not offer any tech classes, so I had to learn about coding and web development on my own. My first coding class was HTML. During my time in college, I've had several people reach out to me for help building their websites and different problems they may have had in their code. I've also had several classes where I worked on building websites, databases, web applications, and coding projects that dealt with Java, HTML, PHP, Unity, and C++.

After a year of coding at the University of Miami, I worked at Oracle as an intern Software engineer for two summers. It was an incredible experience, and I loved seeing how my university knowledge would be used in an actual work setting.

All in all, I'm excited to find a job to land once I graduate in December 2022.

Thank you for taking the time to consider my candidacy. I would love to set up an interview to explore how my skills and experience could best meet your teams' needs. I look forward to speaking with you!

Sincerely,
Christina Matthews
